**Control valves
G 45 ...**

Kv coefficient calculation

Calculation itself is carried out with respect to conditions of regulating circuit and operating medium according to equations mentioned below. Control valve must be designed to be able to regulate maximal flow quantity at given operating conditions. At the same time it is necessary to check whether minimal flow quantity can be even regulated or not.

Because of eventual minus tolerance 10% of Kv_{100} against Kvs and requirement for possible regulation within range of maximal flow (decrement and increase of flow), producer recommends to select Kvs value higher than maximal operating Kv value:

$$Kvs = 1.2 \div 1.3 Kv$$

It is necessary to take into account to which extent Q_{max} involve "precautionary additions" that could result in valve oversizing.

Relations of Kv calculation

		Pressure drop $p_2 > p_1/2$ $\Delta p < p_1/2$	Pressure drop $\Delta p \geq p_1/2$ $p_2 \leq p_1/2$
Kv =	Liquid	$\frac{Q}{100} \sqrt{\frac{\rho_1}{\Delta p}}$	
	Gas	$\frac{Q_n}{5141} \sqrt{\frac{\rho_n \cdot T_1}{\Delta p \cdot p_2}}$	$\frac{2 \cdot Q_n}{5141 \cdot p_1} \sqrt{\rho_n \cdot T_1}$
	Superh. steam	$\frac{Q_m}{100} \sqrt{\frac{v_2}{\Delta p}}$	$\frac{Q_m}{100} \sqrt{\frac{2v}{p_1}}$
	Sat. steam	$\frac{Q_m}{100} \sqrt{\frac{v_2 \cdot x}{\Delta p}}$	$\frac{Q_m}{100} \sqrt{\frac{2v \cdot x}{p_1}}$

Above critical flow of vapours and gases

When pressure ratio is above critical ($p_2/p_1 < 0.54$), speed of flow reaches acoustic velocity at the narrowest section. This event can cause higher level of noisiness and then it is convenient to use a throttling system ensuring low noisiness (multi-step pressure reduction, damping orifice plate at outlet).

Dimensions and units

Marking	Unit	Name of dimension
Kv	m ³ /hour	Flow coefficient under conditions of units of flow
Kv_{100}	m ³ /hour	Flow coefficient at nominal stroke
Kvs	m ³ /hour	Valve nominal flow coefficient
Q	m ³ /hour	Flow rate in operating conditions (T_1, p_1)
Q_n	Nm ³ /hour	Flow rate in normal conditions (0 °C, 0.101 MPa)
Q_m	kg/hour	Flow rate in operating conditions (T_1, p_1)
p_1	MPa	Upstream absolute pressure
p_2	MPa	Downstream absolute pressure
p_s	MPa	Absolute pressure of saturated steam at given temperature (T_1)
Δp	MPa	Valve differential pressure ($\Delta p = p_1 - p_2$)
ρ_1	kg/m ³	Process medium density in operating conditions (T_1, p_1)
ρ_n	kg/Nm ³	Gas density in normal conditions (0 °C, 0.101 MPa)
v_2	m ³ /kg	Specific volume of steam when temperature T_1 and pressure p_2
v	m ³ /kg	Specific volume of steam when temperature T_1 and pressure $p_1/2$
T_1	K	Absolute temperature at valve inlet ($T_1 = 273 + t_1$)
x	1	Proportionate weight volume of saturated steam in wet steam

Cavitation

Cavitation is a phenomenon when there are steam bubbles creating and vanishing in shocks - generally at the narrowest section of flowing due to local pressure drop. This event expressively cuts down service life of inner parts and can result in creation of unpleasant vibrations and noisiness. In control valves it can happen on condition that

$$(p_1 - p_2) \geq 0.6 (p_1 - p_s)$$

Valve differential pressure should be set the way so that neither any undesired pressure drop causing cavitation can occur, nor liquid-steam(wet steam) mixture can create. Otherwise it must be taken into account when calculating Kv value. If the creation of cavitation still threatens, it is necessary to use a multi-step pressure reduction.

Valve flow characteristics

L - linear characteristic

$$Kv/Kv_{100} = 0.0183 + 0.9817 \cdot (H/H_{100})$$

R - equal-percentage characteristic (4-percentage)

$$Kv/Kv_{100} = 0.0183 \cdot E^{(4 \cdot H/H_{100})}$$

Diagram for the valve Kvs value specification according to the required flow rate of water Q and the valve differential pressure Δp

The diagram serves to specify the valve Kvs value regarding to the required flow rate of water at a given differential pressure. It can be also used for finding out the differential pressure value of the existing valve in behaviour with the flow rate. The diagram applies to water with the density of 1000 kg/m³.

For the value $Q = q \cdot 10^n$, it is necessary to calculate with $Kvs = k \cdot 10^n$. Example: water flow rate of $16 \cdot 10^{-1} = 1,6 \text{ m}^3/\text{hour}$ corresponds to $Kv = 2,5 = 25 \cdot 10$ when differential pressure 40kPa.

G 45 115 ...

Lever control valves DN 150 to 400, PN 16 to 100

Description

The valve is double-seated, lever-actuated designed to be actuated with an electric or a pneumatic actuator possibly with an electric or a hydraulic cylinder. It is also possible to use linear or rotative actuator. Its control plug is always designed according to the parameters specified in the order and according to the required type of flow characteristic.

The valves can be delivered with lever actuators of the following producer: ZPA Pečky - Modact MPS, Modact Control MPS and Modact Variant MPR, possibly with linear actuators ZPA Pečky, Regada Prešov and rotative actuators Auma or Schiebel. The connection stem between the valve lever and the actuator is not a subject of the delivery unless it is ordered.

Application

The valve serves as a control, reducing or by-pass element with indirect, possibly with direct actuating. The max. permissible operating pressures acc. to EN 12 516-1 see page 14 of this catalogue. The intention to use the valve for higher temperatures must be agreed upon with the producer. The control valve's proper function depends on the sizing and execution of the control station, therefore the valve design and its specification is recommended to be carried out together with the producer.

Process media

The valves are designed to regulate the flow and pressure of liquids, possibly of vapours and gases e.g. water, steam and other media compatible with material of material of the valve inner parts. The valve max. differential pressure value is 4,0 MPa with respect to the pressure nominal and concrete conditions of operation (ratio p_1 / p_2 , creation of cavitation, above critical flow etc.)

Installation

The valve can be piped only in a horizontal pipeline with vertically positioned stem and the valve lever positioned up above the valve body. The medium flow direction shall correspond to the arrows indicated on the valve body. The lever is mounted on the right side from the medium flow direction unless it is required otherwise.

**Control valves
DN 300, PN 40**

Description

The valve is double-seat, lever-actuated, designed to be actuated with an electric actuator, possibly with an electric or a hydraulic cylinder. It is also possible to use linear or rotative actuator. Its control plug is always designed according to the parameters specified in the order and according to the required type of flow characteristic. The valves can be delivered with lever actuators of the following producer: ZPA Pečky - Modact MPS, Modact Control MPS and Modact Variant MPR, possibly with linear actuators ZPA Pečky, Regada Prešov and rotative actuators Auma or Schiebel. The connection stem between the valve's lever and the actuator is not a subject of the delivery unless it is ordered.

Application

The valve serves as a control, reduction or a by-pass valve with indirect or direct actuating. The max. permissible operating pressures acc. to EN 12 516-1 see page 14 of this catalogue. The intention to use the valve for higher temperatures must be agreed upon with the producer. The control valve proper function depends on the sizing and execution of the control station, therefore the valve design and its specification is recommended to be carried out together with the producer.

Process media

The valves are designed to regulate the flow and pressure of liquids, possibly of vapours and gases e.g. water, steam and other media compatible with material of the valve inner parts. The valve max. differential pressure value is 4,0 MPa with respect to the pressure nominal and concrete conditions of operation (ratio p_1/p_2 , creation of cavitation, above critical flow etc.)

Installation

The valve can be piped only in a horizontal pipeline with vertically positioned stem and the valve lever positioned up above the valve body. The medium flow direction shall correspond to the arrows indicated on the valve body. The lever is mounted on the right side from the medium flow direction unless it is required otherwise.

Type	Modact MTR
Voltage	230 V
Frequency	50 / 60 Hz
Motor power	16 or 25 W
Control	3 - pos. c. (in connection with NOTREP positioner - continuous)
Nominal force	6.3, 10, 16, 25 kN
Travel	12,5 to 100 mm
Enclosure	IP 54 (IP 65 on request)
Process medium max. temperature	Acc. to used valve
Ambient temperature range	-25 to 55°C
Ambient humidity limit	90 % (tropical version: 100 % with condensation)
Weight	27 to 31 kg

Wiring diagram of actuator

Execution - terminal board

Wiring diagram with resistance transmitter 2x100 Ω

Wiring diagram with capacity transmitter 4 - 20 mA (with its source)

Wiring diagram with inductive transmitter (0) 4 - 20 mA; 0 - 5 mA

- SQ1 (MO) power switch in "opening" direction
- SQ2 (MZ) power switch in "closing" direction
- SQ3 (PO) limit switch in "opening" direction
- SQ4 (PZ) limit switch in "closing" direction
- SQ5 (SO) signalisation switch in "opening" direction
- SQ6 (SZ) signalisation switch in "closing" direction
- EH1, EH2 heaters 2 x TR 551 10k/A
- BC2 resistance position transmitter 2 x 100 Ω
- BC3 inductive position transmitter (0) 4 - 20 mA; 0 - 5 mA
- BC4 capacity position transmitter 4 - 20 mA
- C capacitor
- X terminal board

Specification of Modact MTR

Electric actuator MTR, linear										52 420.	X	X	X	X	/	X	X
Execution CX - as standard (-25°C to 55°C), connection via terminal board										0							
Execution T2 - tropical (-25°C to 55°C, 100% condensation), connection via terminal board										6							
Travel [mm]										16							
										25							
										32							
										40							
										63							
Linear unit with acme thread Tr 26x5																	
Nominal linear force ¹⁾	6300	Operating linear force	4000 - 6300	Nominal speed	32	Operating speed	38 - 32	Maximal linear force ²⁾	19000		0

	6300		4000 - 6300		100		120 - 100		29000		9						
Transmitter										Without transmitter							0
										Resistance		2 x 100 Ω					1
												1 x 2000 Ω					2
												2 x 2000 Ω					3
												1 x 2000 Ω + 1x100 Ω					4
										Inductive [mA]		(0) 4 - 20					5
												0 - 5					6
										Capacity [mA]		4 - 20 (with its generator)					7
4 - 20 (without its generator)					8												
Special mechanical connection										Columns UNL							7
										Columns Č. Třebová							8
										2 signalisation switches SQ5, SQ6							

1) Switching-off linear force is set to nominal value with tolerance of + 30 %.

2) Measured linear force with motor running into short-circuit state with voltage of 230 V on position controller.

Dimensions of Modact MTR

	With acme thread			With ball bolt		
Columns ČT	130	378	707	130	400	729
Columns UNL	74	320	649	74	344	673

Detail of coupling

Maximal permissible overpressures acc. to EN 12 516-1 [MPa]

Material	PN	Temperature [°C]							
		200	250	300	350	400	450	500	550
Cast steel 1.0619	16	1.14	1.04	0.94	0.88	0.84	---	---	---
