REVERSE CONTROL VALVES  
**200 line**  
with **SIEMENS** actuators

# 200 line

**RV / HU 211****RV / HU 221****RV / HU 231**

Two-way single-seated control valve with reverse function

**RV / HU 213****RV / HU 223****RV / HU 233**

Two-way single-seated control valve with reverse function and pressure balanced plug

**RV 215****RV 225****RV 235**

Three-way control valve with reverse function

Control valves **200 line** designed for regulation and shut-off of process liquid flow. The selected materials correspond to recommendations stipulated by ČSN EN 12516-1 (8/2015) - steel and ČSN EN 1503-3 (1/2002) - cast. The maximal permissible operating pressures in behaviour with types of material and temperature are specified in the table on page 24 of this catalogue.

**Control**

By their reverse design - valves **RV / HU 200** are especially designed for Siemens actuators

**Application**

**RV / HU 2xx** - heating, ventilation, power generation and chemical processing industries

**Process media**

**RV / HU 2xx** - liquids, gases and vapours without abrasive particles  
e.g. water, steam, air and other media compatible with material of the valve inner parts

The usage of the valve made of spheroidal cast iron (RV 210) for steam is limited by the following parameters. The steam must be superheated (its dryness at valve outlet  $x_i \leq 0,98$ ) and inlet pressure  $p_i \geq 0,4$  MPa when differential pressure is of above-critical value, and  $p_i \leq 1,6$  MPa when differential pressure is of under critical value. In case these two conditions are not kept, it is necessary to use the valve made of cast steel (RV 220). To ensure a reliable regulation, the producers recommends to pipe a strainer in front of the valve into pipeline or ensure in any other way that process medium does not contain abrasive particles or impurities.

**Installation**

The valve can be installed in any position except position when the actuator is under the valve body. The valve is to be piped the way so that the direction of medium flow will coincide with the arrows on the body.

It is necessary to protect the actuator from excessive heat from the pipeline at medium temperatures above 150 °C, e.g. by appropriately insulating the pipeline and valve and tilting the actuator from the vertical axis. When the valve is used as diverting, process medium flows through common valve port AB and split streams leave through valve ports A and B.). Detailed informations are given in the instruction for installation and service.

## Packings

### O-Ring EPDM

Packing is designed for non-aggressive media with temperature from 0 to 140 °C. Packing excels with its reliability and long time tightness. It has ability of sealing even if the valve stem is a bit damaged. Low frictional forces enables valve to be actuated with a low linear force actuator. Service life of sealing rings depends on operating conditions and it is more than 400 000 cycles on average.

### DRSpack® (PTFE)

DRSpack®(Direct Radial Sealing Pack) is a packing with high tightness at both low and high operating pressure values. It is the most used type of packing suitable for temperatures ranging from 0 °C to 260 °C. The pH range is from 0 to 14. The packing enables using of actuators with low linear force. The design enables an easy change of the whole packing. The average service life of DRSpack® is more than 500 000 cycles.

### Graphite

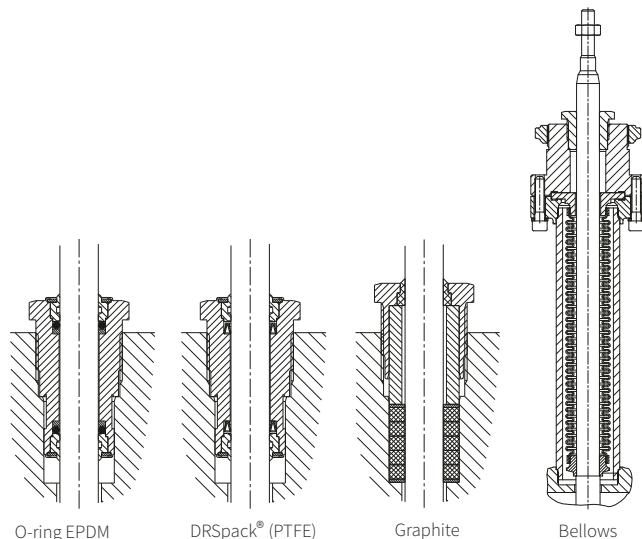

This type of packing can be used for media with temperature up to 550 °C and pH range: 0 to 14. Packing can be "sealed up" either by screwing the packing screw in or adding another sealing ring. In regard of intensive frictional forces, graphite packing is suitable for actuators with a sufficient linear force.

### Bellows

Bellows packing is suitable for low and high temperatures ranging from -50 °C to 550 °C. Bellows ensures absolute tightness to environment. Packing is equipped with safety PTFE packing as standard to prevent medium from leaking in case of damage to bellows. Intensive linear forces are not required.

### Application of bellows packing

Bellows packing is suitable for applications with very aggressive, toxic or other dangerous media that require absolute tightness to environment. In such case, it is necessary to check compatibility of used body material as well as the valve inner parts material with process medium. It is recommended to use bellows with safety packing preventing medium from leaking in case of damage to bellows when there is an extremely dangerous process medium used. Bellows is also a great solution to use of process medium either with temperature below zero when ice accretions cause premature damage to packing or with high temeperatures when bellows ensures medium cooling.

### Service life of bellows packing

Bellows material	Temperature				
	200°C	300°C	400°C	500°C	550°C
<b>1.4541</b>	100 000	40 000	28 000	7 000	inappropriate
<b>1.4571</b>	90 000	34 000	22 000	13 000	8 000

Values specified in the table above show minimal guaranteed number of cycles with the valve full stroke when the bellows is fully lenghtened and pressed. In regulation, when the valve plug moves only in a portion of the stroke range at the inner centre of the valve, the service life of the bellows is many times longer then depending on concrete operating conditions.

### Principles for plug type selection

V-ported plugs should not to be used in above - critical differential pressures with inlet pressure  $p \geq 0,4$  MPa and for regulation of saturated steam. In these cases we recommend to use a perforated plug. The perforated plug should be also used always when cavitation may occur due to a high differential pressure value or valve ports erosion caused by high speed of process medium flow. If the parabolic plug is used (because of small Kvs) for above critical differential pressures, it is necessary to close both plug and seat with a hard metal overlay, i.e. stellited trim.

### Rangeability

Rangeability is the ratio of the biggest value of flow coefficient to the smallest value. In fact it is the ratio (under the same conditions) of highest regulated flow rate value to its lowest value. The lowest or minimal regulated flow rate is always higher than 0.

# RV / HU 2x1

Control valves and  
Fail-safe action  
valves

**DN 15 - 150**  
**PN 16 and 40**

Control valves **RV 211**, **RV 221** and **RV 231** are single-seated valves designed for regulation and shut-off of process medium flow.

Valves with a fail-safe action **HU 211**, **HU 221** and **HU 231** have the same design as RV 2x1 with addition of increased seat sealing. Valves are equipped with fail-safe action actuators (valve closes upon power failure).

## Kvs values and differential pressures

$\Delta p_{max}$  value is the valve max. differential pressure when open-close function is always guaranteed. In regard of service life of seat and plug, it is recommended so that permanent differential pressure would not exceed 1.6 MPa. Otherwise it is suitable to use perforated plug or sealing surfaces of seat and plug with a hard metal overlay.

# RV 2x5

## Control valves

**DN 15 - 150**  
**PN 16 a 40**

Control valves **RV 215**, **RV 225** and **RV 235** are three-way valves with mixing or flow-diverting function.

Technical data			
Series	RV 215	RV 225	RV 235
<b>Three-way control valve with reverse function</b>			
Type of valve			
Nominal size range		DN 15 to 150	
Nominal pressure		PN 16, PN 40	
Body material	Spheroidal cast iron EN-JS 1025 (EN-GJS-400-10-LT)	Cast steel 1.0619 (GP240GH) 1.7357 (G17CrMo5-5)	Stainless steel 1.4581 (GX5CrNiMoNb19-11-2)
Seat material:	DN 25 - 50	1.4028 / 17 023.6	1.4571 / 17 347.4
DIN W.Nr./ČSN	DN 65 - 150	1.4027 / 42 2906.5	1.4581 / 42 2941.4
Plug material:	DN 25 - 65	1.4021 / 17 027.6	1.4571 / 17 347.4
DIN W.Nr./ČSN	DN 80 - 150	1.4027 / 42 2906.5	1.4581 / 42 2941.4
Operating temp. range	-10 to 300 °C	-10 to 300 °C	-10 to 300 °C
Face to face dimensions	Line 1 acc. to ČSN-EN 558+A1 (5/2012)		
Connection flanges	Acc. to ČSN-EN 1092-2 (1/1999)	Acc. to ČSN-EN 1092-1+A1 (7/2013)	
Flange face	Type B1 (raised-face) acc. to ČSN-EN 1092-2 (1/1999)	Typ B1 (raised-face) nebo Typ F (female) nebo Typ D (groove) acc. to ČSN-EN 1092-1+A1 (7/2013)	
Type of plug	V-ported, perforated		
Flow characteristic	Linear, equal-percentage, LDMspline®, parabolic		
Kvs value	1.6 to 360 m³/h		
Leakage rate in A-AB way	Class III. acc. to ČSN-EN 1349 (5/2001) (<0.1% Kvs) for control valves with metal-metal seat sealing Class IV. acc. to ČSN-EN 1349 (5/2001) (<0.01% Kvs) for control valves with metal-PTFE seat sealing		
Leakage rate in B-AB way	Not guaranteed, to 2% Kvs		
Rangeability r	50 : 1		
Packing	O - ring EPDM $t_{max} = 140$ °C, DRSpak®(PTFE) $t_{max} = 260$ °C, bellows $t_{max} = 260$ °C		

## Kvs values and differential pressures

$\Delta p_{max}$  value is the valve max. differential pressure when open-close function is always guaranteed. In regard of service life of seat and plug, it is recommended so that permanent differential pressure would not exceed 1.6 MPa. Otherwise it is suitable to use perforated plug or sealing surfaces of seat and plug with a hard metal overlay.

<sup>1)</sup> parabolic plug in straight way, V-ported plug in angle way

<sup>2)</sup> V-ported plug in angle way, in straight way for linear characteristic V-ported plug and for equal-percentage characteristic parabolic plug

metal - version with metal - metal seat sealing

PTFE - version with metal - PTFE seat sealing (does not apply to contoured plugs)

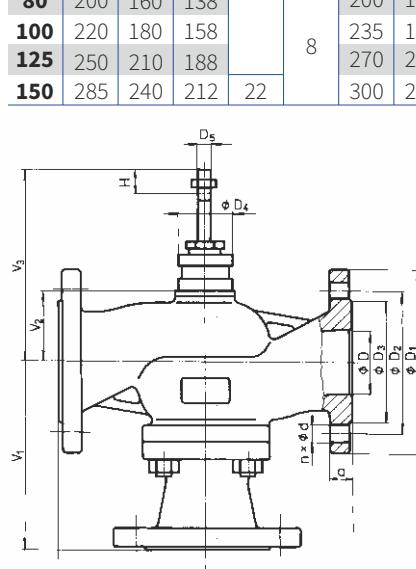

Max. differential pressures specified in table apply to PTFE and O-ring packing.  $\Delta p_{max}$  for bellows must be consulted with the producer.

Bellows packing can be used with V-ported plug only.

Max. differential pressure  $\Delta p$  for valves PN 16 must be 1.6 MPa.

## Description

Each actuator with continuous control signal is equipped with ACT control technology enabling the following features as standard:

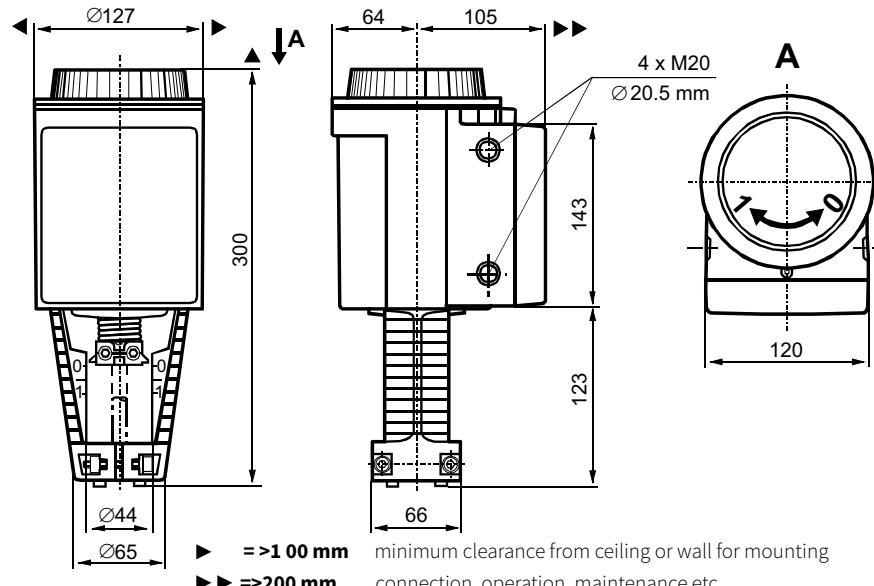

- stroke range calibration
- state indication via LED
- flow characteristic selection (log / lin)
- selection of control signal at Y terminal
- feedback signal at U terminal corresponding to current stroke position
- forced control at Z terminal

Version with improved electronics (UA) further enables:

- inversion of control signal
- sequence control
- stroke limiting

## Dimensions of actuator

- =>100 mm minimum clearance from ceiling or wall for mounting
- =>200 mm connection, operation, maintenance etc.

## Accessories (optional)

Auxiliary switch 24 V ASC1.6

## Description

Each actuator with continuous control signal is equipped with ACT control technology enabling the following features as standard:

- stroke range calibration
- state indication via LED
- flow characteristic selection (log / lin)
- selection of control signal at Y terminal
- feedback signal at U terminal corresponding to current stroke position
- forced control at Z terminal

Version with improved electronics (UA) further enables:

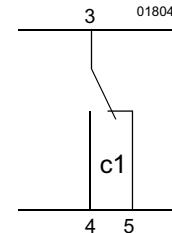

- inversion of control signal
- sequence control
- stroke limiting
